

Mini-Assignment #4

CS201 Spring 2023

10 points

due Wednesday, Feb. 15th, 11:59 pm

The Function to Write

First define a structure:

```
#define MAXNAMELEN 31

typedef struct {
    char name[1+MAXNAMELEN];
    int id;
} Record;
```

Then write the function `int searchFor(int id, int numRecords, Record *records)`

This will take an array of `numRecords` records, search through it, and return the index of the first element of the array whose id value matches the `id` parameter; otherwise, it will return -1.

What to Submit

Submit this file to Blackboard: `mini-4.netid.c`.

Use your UVM netid in the filenames. Do not put a `main()` in the `.c` file that you submit.
